## Quarterly Asset Class Report Real Assets

Canterbury Consulting ("CCI") is an SEC registered Investment Adviser. Information pertaining to CCI's advisory operations, services, and fees is set forth in CCI's current Form ADV Part 2 (Brochure), a copy of which is available upon request and at [www.adviserinfo.sec.gov](http://www.adviserinfo.sec.gov). Information provided through CCI's Quarterly Outlook related to market or asset class performance figures is believed to be derived from reliable sources. However, CCI assumes no responsibility for their content or the manner in which the viewer utilizes such information. The performance information presented in certain charts or tables is for informational purpose only and represents historical performance based on available market data results for the quarterly period shown above and does not reflect any performance related to trading in actual accounts. Any recommendations or statement made in the Quarterly Outlook is not to be construed as specific investment advice. The viewer should be aware of the inherent limitations of data derived from the retroactive application of historical data developed with the benefit of hindsight and that actual results may differ. Actual performance with client accounts would be materially less than the stated performance results for the same period when including the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid.

Canterbury Consulting recommends and communicates asset-class strategy with the objective of constructing a diversified portfolio of real asset strategies designed to (in aggregate):

- Preserve purchasing power
- Generate uncorrelated returns to other asset classes
- Manage the volatility profile of the segment

- Real assets are appropriate for investors with long time horizons (10+ years) and inflation-linked liabilities.
- Real asset portfolios should aim to maximize high inflation sensitivity and high inflation reliability, while limiting volatility.
- Portfolio allocations will differ depending on the client’s risk tolerance.

# Asset Class Indicators

## Real Assets

Current

+/- 1 Standard Deviation From the Mean

10-Year High and Low

- Canterbury monitors several inflation and real asset indicators to help detect imbalances that are expected to cause price pressures.
- Inflation, measured by CPI, remained persistently elevated over the quarter, reaching a high of 7%. Inflation breakeven rates marginally increased and stayed above 2%.
- Commodity prices rose due to supply constraints and elevated demand. Energy-related-assets faced heightened volatility as OPEC+ signaled they would increase production.
- The Case-Shiller Home Price Index remained persistently high as demand for U.S. real estate continued to outpace supply.

Source: Bloomberg as of December 31, 2021

- Inflation Reliability (% of time asset is positive when inflation is positive)
- Inflation Sensitivity (rate of change, i.e. how many units an asset moves given a 1 unit change in inflation)

- Risk-adjusted returns of the remaining asset classes are used to help optimize real asset portfolios
